

4/10 Ton Riktsats 4/10 Ton Portable Power Pack

Model NO: K 5170 / K 5171

Thank you for pure hasing this Kamasa Tools 4/10 Ton Portable power pack. Before attempting to use the unit, please read this instruction booklet carefully.

Tack för ditt inköp av Kamasa Tools 4/10 ton Riktsats. Innan du börjar använda produkten, läs nogaigenom bruksanvisningen.

OPERATION INSTRUCTION

When you want use this jack, turn the control knob of the valve clovkwise, pull and push the handle, for easy to use you can put it in any position from horizontal to vertical, but the tube must face downwards, if necessary, the components can be combined with the body. When you want release the jack, turn the control knob of the valve counterclockwise.

MAINTENANCE

FOR LOAD: 1. Maximun load can not exceed the rated capacity.

- The load on the sperader ram can not exceed 1/2-ton.
- The load can not exceed the half of the capacity when all tubes used.
- The extension of the piston can not exceed the stroke.

FOR SAFETY: 1. Working oil: 10.

- Check the level of oil, if it is not sufficient, please add the same hydraulic oil.
- After using, close the valve with the cover, to keep the oil free from the dust and dirt.
- Before lifting, adjust the jack slowly to make the load coaxial with resnect to the jack.
- Tube can not be bent, near to the catting tools and fires, also can not put te weight on it.

HYDRAULIC OIL: 1. Always use good quality hydraulic jack oil (Recommended ISO Vg15).

- If possible do not mix the type of oil. At no time use any other type of oil or fluid. When filling with hydraulic oil do not permit dirt or any other substance to enter the hydraulic system.
- Check the hydraulic system every 4 months to make sure it is free from corrosion. If corrosion is present clean the part and wipe it with an oily cloth.

SPECIFICATIONS

Capacity	4ton	10ton
Max lifting height	120mm	135mm
Cylindrt min height	278mm	390mm
Working pressure	56Mpa	62Mpa
Oil be filled	350g	500g
Net weight	20kg	33kg

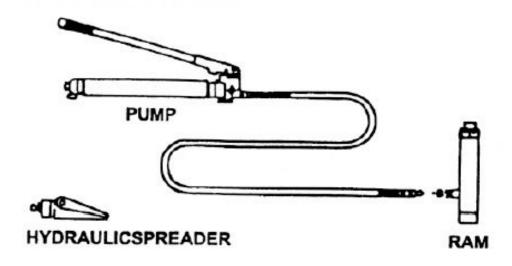

PARTS LIST

TROUBLESHOOTING CHART

repairs or replacement must be done by a qualified person of an authorized service center only. Stop using this equipment immediately if any of the following problems occur, as it may cause personal injury. Any

When use this equipment, after correctly connection as per operation manual, pump up the handle, the ram doesn't work When use this equipment, after correctly connection as per operation manual, pump up the handle, the ram at first goes up and then descends. When use this equipment, after correctly connection as per operation manual, pump up the handle, the ram at first goes up and then descends. 1. the steel ball is 1) release the valve, pump up the handle for 10-15 times. 2) Close the valve, pump up the handle for another 5-10 times. 3) Repeat step 1) and 2) for about 3 three times, this problem will be settled. 1. Tighten the knob of the valve. 2. Please follow the steps: 1. Tighten the knob of the valve. 3) Release the valve, pump up the handle for 10-15 times. 1) Release the valve, pump up the handle for another 5-10 times. 2) Close the valve, pump up the handle for another 5-10 times. 3) Repeat step 1) and 2) for about 3 three times, this problem will be settled. 2. Please follow the steps: 2. Close the valve, pump up the handle for another 5-10 times. 3) Repeat step 1) and 2) for about 3 three times, this problem will be settled. 1. Tighten the knob of the valve. 2. Please follow the steps: 2. Close the valve, pump up the handle for another 5-10 times. 3) Repeat step 1) and 2) for about 3 three times, this problem will be settled. 1. Tighten the knob of the valve. 2. Please follow the steps: 2. Please follow the steps: 3) Repeat step 1) and 2), the problem will be settled. 1. Stop work imme diately, be sure of correct connection of the valve, pump up the handle for another 5-10 times. 3) Repeat step 1) and 2), the problem will be settled.	PROBLEM	POSSIBLE CAUSE(S)	SOLUTION
1. unlock of the valve. 2. Scrap iron inside the valve cause unable to be shut off. 1. Uncorrect of connection or unbalance of the footing shut of the footing or unbalance of the footing shut of the footi		1. the steel ball is immersed inside for too long time.	 Please follow the steps: release the valve, pump up the handle for 10-15 times. Close the valve, pump up the handle for another 5-10 times. Repeat step 1) and 2) for about 3 three times, this problem will be settled.
2. Scrap iron inside the valve cause unable to be shut off. 1. Uncorrect of connection or unbalance of the footing s	When use this equipment, after	1. unlock of the valve.	1. Tighten the knob of the valve.
Uncorrect of connection or unbalance of the footing		2. Scrap iron inside the valve cause unable to be shut off.	 Please follow the steps: Release the pressure by turning the knob anti-clockwise, pump up the handle 10-15 times. Close the valve, pump up the handle 5-10 times. Repeat step 1) and 2), the problem will be settled.
	When use this equipment, after correctly connection as per operation manual, the ram is found gradient and the piston rod curved.	1. Uncorrect of connection or unbalance of the footing	1. Stop work immediately, be sure of corrct connection of the ram and the base, and put it on the hard ground. Always be secure of its vertical position

the rear of the pump to discharge unwanted air, then tighten it after the piston rod is reposited. volume is stated below. Do not add oil excessive or the piston rod can not be reposited normally. If so, turn on the screw on screw on the rear of the pump, empty the used hydraulic oil, then injecting withfresh oil by oil gun. The recommendatory oil After used for 30-50 times, ideal to change the hydraulic oil on the condition of the equipment not on working. Turn on the
