

Note: Immediately after the installation of Digital Lightning 8025, the high beam must be activated for at least 5 seconds to allow the electronics to calibrate against the car. This operation only needs to be performed once after the installation, or if the car has been without power (battery). When this calibration is finished, Digital Lightning 8025 will be flashing 4 times to indicate that it has saved the configuration.

Instructions how to deactivate and activate Digital Lightning 8025:

Digital Lightning 8025 is always delivered in an active mode. Should you however wish to deactivate its function, please follow the steps below. The same steps will apply when you wish to activate the unit again.

1. Let the main beam light be turned off for at least 5 seconds.
2. Activate the configuration mode by flashing with the main beam 10 times during a period of 5 seconds, i.e. 500ms between each flash.
3. Wait 1 second.
4. The main beam will light up to indicate that you have successfully enabled the configuration mode. The configuration mode will last for 5 seconds.
5. During the configuration mode, flash with the main beam light once to switch between the "activated" or "deactivated" mode.
6. Wait for the main beam light to turn off. This indicates that the configuration mode is now disabled.
7. Confirm that you have completed the configuration mode by flashing with the main beam 10 times during a period of 5 seconds, i.e. 500ms between each flash.
8. Wait 1 second.
9. Digital Lightning 8025 will now indicate that it has saved the configuration by flashing with the main beam as follows:
 - One long flash: The flashlight function is deactivated.
 - Two short flashes: The flashlight function is activated.
